

# Group 4 Comment Api

Adam Saylor, Ryan Pallman, Alex Sutherland

# Sprint 6 Review

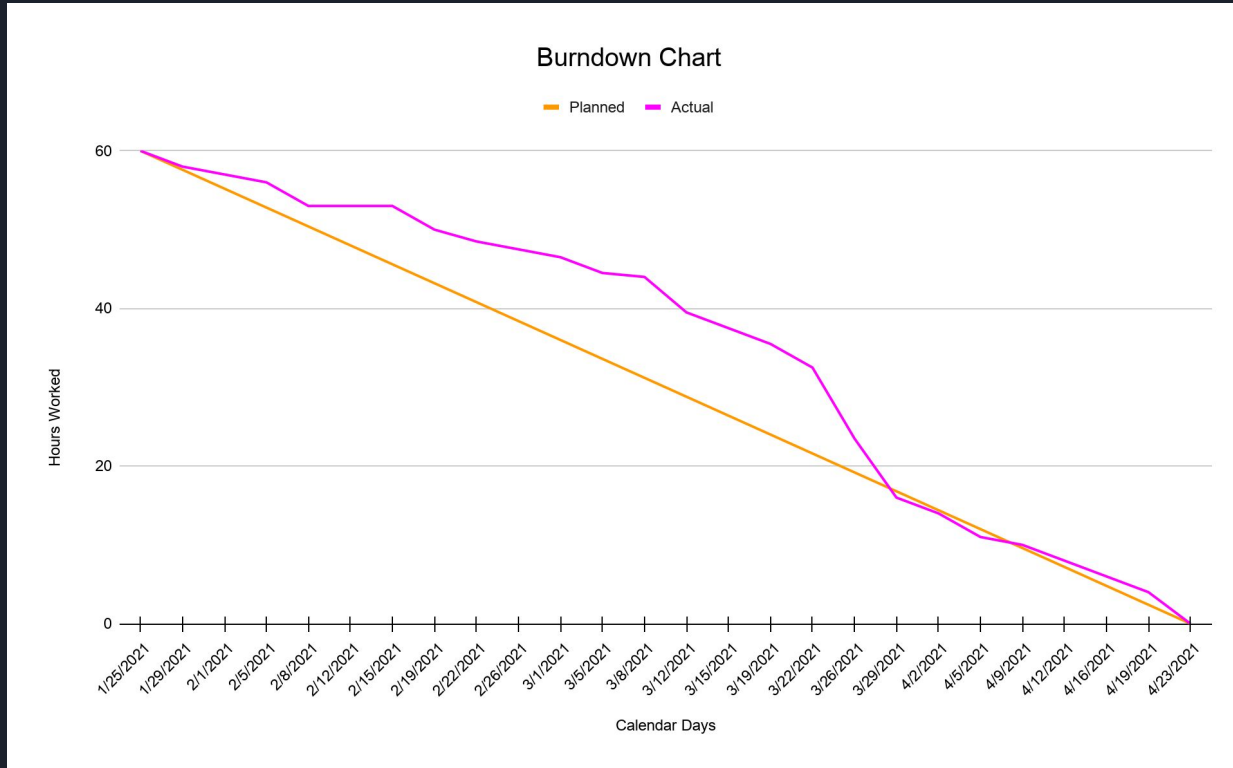

## What worked

- Polishing up features
- Address any remaining bugs
- Feedback from user testing

## What did not work

- Hard to organize group time due to outside obligations

# Initial UML

# Final UML

# Design Pattern: Model View Controller

# GitHub

- Utilized the Projects tab to delegate tasks and responsibilities.
- Utilized the Issues tab to track bugs and ensure they were addressed.
- Utilized the Pull Requests tab to track changes from our dev branch to main and merge them once reviewed.

March 25, 2021 – April 25, 2021

Period: 1 month ▾

## Design decisions - REACT

- Ensure there was a robust frontend to demonstrate our API
- Offers more frontend customization compared to Adonis
- Learning opportunity

# Quality Assurance - Cypress + Cucumber

- Cypress works with DOM elements to provide frontend testing
- Set tests to run nightly to ensure features are always working

# Quality Assurance - Cypress + Cucumber Cont.

- Cucumber for BDD (Behavior Driven Development)
  - Given the opportunity, would start our project writing these tests
- Demo!

```
Given( expression: 'I navigate to acommentapi', implementation: () => {  
  
  cy.intercept("GET", "/api/comments").as( alias: "getComments");  
  cy.intercept("POST", "/api/comments").as( alias: "makeComment");  
  
  cy.visit('https://acommentapi.com/');  
  cy.wait("@getComments");  
})
```

Scenario: User adds a comment

Given I navigate to acommentapi  
Then I want to add a comment  
And I type out a comment  
And I post the comment  
Then The comment posts

```
Then( expression: 'I want to add a comment', implementation: () => {  
  
  cy.get('button:contains(Add Comment)').click()  
})  
  
And( args: 'I type out a comment', () => {
```
